
SOLIDARITY. UNITY. SHARED SPIRIT.

SABKAT

Whitepaper

A little fierce. A little friendly.

Version 2.0 | October 10, 2026 | sabkat.com

A community-minded meme token on Solana.

No automatic holding rewards or guaranteed financial return.

A big supply for a big community.

Sabkat (SABKAT) is a meme token on Solana inspired by solidarity, unity, and socialist values of cooperation, equality, and mutual support. SabKat comes from Charleston, West Virginia. His black-cat character and red scarf express a community spirit: welcoming people, standing together, and looking out for one another. His journey through working communities is told through artwork and stories.

These values are the project's outlook. They do not establish collective ownership, voting rights, a legal cooperative, or a claim on project assets. No payment utility, revenue share, or redemption promise is currently committed.

The token at a glance

Name / symbol: Sabkat / SABKAT

Network / program: Solana mainnet; standard SPL Token program

Original minted supply: 600,000,000,000,000 SABKAT (600 trillion)

Decimals: 4; the smallest unit is 0.0001 SABKAT

Mint authority: disabled; no additional tokens can be minted

Freeze authority: unset

Metadata: editable; the project controls its hosted description and image

Why 600 trillion?

A big supply for a big community. SABKAT's 600 trillion tokens reflect our vision of solidarity, unity, and sharing, giving people room to participate in whole-token amounts. This is a community framing of the chosen supply, not a valuation model. Supply alone does not determine price or create financial value.

Mint address:

[CzKFqeEjhtAYz981CWfhUmEt7QcvEzyVnghQWYEGSWr8](https://solscan.io/address/CzKFqeEjhtAYz981CWfhUmEt7QcvEzyVnghQWYEGSWr8)

Follow the supply.

All 600 trillion SABKAT were minted before launch. Tokens allocated to the pool, reserve, and giveaway come from that existing supply. The launch figures and historical wallet snapshots below are not current balances. Giveaway and bug-reward allocations are transfers of existing tokens, not new issuance.

Launch pool allocation

333,333,333,333,333 SABKAT + 3.5 SOL were the starting deposits in the Raydium SOL/SABKAT standard constant-product pool. Pool reserves change with swaps, liquidity movements, and fees. These launch deposits are not a live balance or market valuation.

[Pool: 7xcZF8pAuZ9b3gwz25h7ba7simXfoWJBVFcnbSiF8QD8](#)

Project reserve wallet

266,656,666,666,667 SABKAT held in the October 1 historical snapshot. This is a project-controlled reserve outside the trading pool. No fixed reserve vesting or release schedule is committed here. Subsequent transfers, including bug rewards, are not reflected in this historical figure. Publication of the address does not restrict its owner's ability to transfer tokens.

[9Zv2QtxnRKEB56Xb1vQMqBt5EGN7OfDfApTWMVbCgsz3](#)

Giveaway treasury

10,000,000,000 SABKAT held in the October 1 historical snapshot. The website round allocates 1,000,000 SABKAT per wallet, for up to 10,000 wallets. One claim per wallet is not proof of one claim per person. Claimants pay transaction costs and any required token-account deposit.

[6PBQvEaSkxy5sncuivYhx25CU6ALdS2CC8qELOMRO2ws](#)

Historical snapshot: October 1, 2026 at 19:09 GMT. No fresh balance snapshot is asserted in this revision. Wallet balances are dated observations, not a continuously updated dashboard. Open the public explorer links for current token accounts and transactions. Reserve, treasury, and launch pool amounts should not be read as today's exhaustive holder distribution.

Bug-reward wallet - 6 billion SABKAT program budget

[Av7Uha2cnKhEEExWhNkdinzq61joS9KSO1dGR4y5Ddzwx](#)

This allocation comes from the existing supply and is not a live balance. Review rules appear on page 6.

Do not send SOL or tokens directly to project wallets to buy, claim, or submit a bug report. Use the published trading link, giveaway form, or support contact.

Unlocked, with the policy visible.

Liquidity remains under project control

The project's policy is to keep its liquidity unlocked. The creator received liquidity-provider (LP) tokens at pool creation; the creation transaction did not lock or permanently destroy them. The project retains the ability to withdraw the liquidity represented by its LP holdings. Withdrawal can reduce available trading liquidity and increase price impact.

This paper does not promise permanent liquidity, a minimum SOL reserve, a fixed token price, or guaranteed ability to sell at a particular price. Pool fees earned by a liquidity provider are separate from rewards for simply holding SABKAT.

SABKAT burns and LP burns are different

Burning SABKAT permanently reduces the token supply. No SABKAT burn amount, rate, or schedule has been committed, and burning tokens does not guarantee a price increase. Any future announced burn should identify the amount and a verifiable transaction.

Permanently destroying LP tokens without redeeming them gives up the ability to withdraw the corresponding liquidity. This is different from burning SABKAT. No LP burn commitment is being made in this paper.

What is fixed, and what remains editable?

Fixed: the mint address, four decimal places, and disabled mint authority. With mint authority disabled, additional tokens cannot be created; holder-authorized burns can still reduce supply.

Editable: the on-chain metadata remains mutable. The project can update permitted metadata fields, and its domain-hosted JSON and image can change. Wallets and explorers may keep their own cached images. Editable metadata does not grant the ability to mint more tokens or spend another holder's tokens.

[Pool creation transaction](#)

Shared spirit. Clear information.

Participation can include artwork, memes, conversation, and community contributions. Token ownership is not required to follow the project. Holding SABKAT provides no automatic staking or minting rewards. Future ideas remain proposals until a specific commitment is published.

Buying and the website giveaway

Use sabkat.com/help for buying steps and wallet support. Verify the full mint address before trading. Review the quote, fees, minimum received, and price impact, and keep SOL available for transaction costs. The website giveaway is subject to service availability and remaining places.

Risks to understand

Price and liquidity: SABKAT is a speculative meme token. Its value can fall substantially or to zero. Thin liquidity can cause large price movements, and project-controlled liquidity can be withdrawn.

Concentration and control: a large share of the original supply remains in a project-controlled reserve. Transfers or sales from major holders can affect the market. The reserve has no announced vesting or fixed release schedule.

Operational risks: wallet errors, compromised devices, network outages, software faults, and service interruptions can cause failed transactions or loss. This paper does not claim an independent security audit. The giveaway enforces one claim per wallet, not one per person.

Metadata and impersonation: names, symbols, and artwork can be copied. Metadata remains editable. Use the mint address as the token identifier. Never share a recovery phrase or private key.

Version 2.0 updates artwork, community channels, bot operation, contact information, and the bug-reward program. Historical wallet figures retain their original date. This is an informational project description, not a promise of investment returns.

Help the Kat. Help each other.

A community built around the story

SabKat travels from Charleston through working communities, helping people and carrying the spirit of Solidarity Forever. Community suggestions can inform future episodes, while the project maintains a consistent character and story direction. Artwork, questions, and useful feedback are welcome; token ownership is not required.

Official conversations: [@SabKatCoin on X](#) and [Telegram channel and linked discussion group](#). Contact sabkatcoin@gmail.com. Messages sent to contact@sabkat.com are forwarded to the project inbox.

AskSabKatBot and automated character hosts

[@AskSabKatBot](#) welcomes members, provides project information, and supports group moderation. Three clearly labeled automated character hosts share that account: Trail Guide asks story questions at 9 a.m.; Workshop Host runs trivia at 2 p.m.; Diner Host asks community questions at 7 p.m. Times use America/New_York, including daylight saving time.

The hosts do not pretend to be human members or converse with each other. Administrators can pause their schedule. The bot does not control funds, approve transactions, or make project commitments. Operation depends on server and Telegram availability.

Verified bug reports

The bug-reward program allocates **6 billion SABKAT** from the existing supply. This is a program budget, not a current wallet balance. Suggested rewards: **1-5 million** for confirmed minor display, link, or information issues; **10-25 million** for reproducible website problems affecting buying links or wallet connection. Serious security issues are assessed individually after verification.

Rewards are reviewed manually based on impact, verification, and remaining budget. Only the first valid report of an issue is eligible. Duplicate reports, general suggestions, and faults in third-party wallets or trading platforms do not qualify. These token amounts do not promise a cash value.

Report privately with the page URL, device, browser or wallet app, and steps to reproduce. Never send a recovery phrase or private key. Limit testing to your own accounts; do not access other people's data, move funds, or disrupt services.
